

Logos User Manual

English · v0.1.0

Local TTS Offline speech synthesis	Dictionary English, Chinese, expressions	PDF Reader Read selectable PDF text
Pronunciation Listen and practice	Vocabulary Flashcards + spaced review	Audio Export WAV / MP3 / long-form

Created and developed by CourtneyJr (@direwuff) and 珑珑王
Development assistance: OpenAI ChatGPT

Important: Logos includes its own local runtime and speech models. Normal users do not need to install Node.js, npm, Python, or a paid TTS API.

1. Quick Start

Windows installation

1. Download all three files: Install Logos.exe, Install Logos-1.bin, and Install Logos-2.bin.
2. Keep all three files in the same folder. Do not rename or separate the .bin files.
3. Double-click Install Logos.exe.
4. If Windows shows an unsigned-app warning, verify that the files came from the official Logos GitHub Release before continuing.
5. When asked to choose a folder, select your main Obsidian vault folder. Do not select the .obsidian folder.
6. Finish installation, open Obsidian, then go to Settings → Community plugins → enable Logos.

macOS installation

7. Download Logos-Mac-Easy-Install-Part-1.zip and Logos-Mac-Easy-Install-Part-2.zip and keep them in the same location.
8. Double-click both ZIP files to extract them.
9. Confirm that “Logos Mac Installer” and “Logos Mac Models Part 2” appear beside each other.
10. Open Logos Mac Installer and double-click Install Logos.command.
11. If macOS says the developer cannot be verified, Control-click Install Logos.command → Open → Open.
12. Choose your main Obsidian vault folder, not the .obsidian folder.
13. After installation succeeds, open Obsidian → Settings → Community plugins → enable Logos.

Updating Logos: If Logos is already installed, use Obsidian Settings → Community plugins → Logos → Uninstall, close Obsidian, then install the new version.

2. What Logos Does

Area	What you can do
Reader	Read an entire note, selected text, the current paragraph, or text from the cursor onward.
Dictionary	Look up English/Chinese words, morphology, idioms, phrasal verbs, and learner expressions.
Vocabulary	Save entries, mark Learning/Known, and study with flashcards and spaced review.
PDF	Read selectable text directly from PDFs opened in Obsidian.
Pronunciation	Listen to target words/phrases and use slower or alternate voices for practice.
Export	Save generated speech as WAV or MP3 and create merged long-form audio.

3. Reader: Reading Notes Aloud

Reading modes

- Entire note - reads the whole current Markdown note.
- Selected text - reads only highlighted text.
- Current paragraph - reads the paragraph around the cursor.
- From cursor - starts at the cursor and continues through the remaining text.

Playback controls

- Play - start synthesis and playback.
- Pause - pause the current audio.
- Resume - continue from the paused position.
- Stop - stop the current speech task.
- Seek - move within generated audio when available.

- Speed - change speaking speed.
- Normalize / Raw - choose whether Logos cleans text before speech or reads the raw form.

Tip: For long notes, Logos automatically splits text into manageable chunks and prepares later chunks while earlier chunks are playing.

4. Voices and Language Support

Bundled voice packs

- Kokoro English - high-quality English speech.
- Kokoro Multilingual - multilingual speech support.
- Kokoro Multilingual Fast - lighter/faster multilingual synthesis.
- VCTK - many English speakers for additional voice variety.

Voice selection features

- Choose speakers from the voice selector.
- Filter some English voices by accent and gender.
- Preview voices before using them.
- Mark favorite voices for easier reuse.
- Chinese text is detected automatically and routed to a multilingual voice path.

First-use delay: The first request after switching models may take longer because the model has to load into memory.

5. Long-Form Speech and Audio Export

- Long text is split into deterministic chunks for more reliable synthesis.
- The next chunk can be prepared while the current chunk is playing.
- Save generated speech as WAV.
- Save generated speech as MP3.
- Merge long-form chunks into one complete audio file.
- For Markdown notes, Logos saves long-form output in a nearby “Logos Audio” folder and can insert an audio embed at the top of the note.

PDF export: Audio created from a PDF selection is saved differently from Markdown-note audio and does not automatically insert an embed into a Markdown note.

6. PDF Reading

14. Open a searchable/selectable PDF inside Obsidian.
15. Highlight the text you want to hear.
16. Open Logos Reader and use the selected-text reading workflow.
17. Logos extracts the active PDF selection and sends it to the local speech engine.

Scanned PDFs: If the PDF is only an image and the text cannot be selected, Logos cannot treat it like normal searchable PDF text.

7. Dictionary and Learner Expressions

Dictionary results can include

- Word or expression
- Language
- Pronunciation
- Part of speech
- Definition
- Example sentence
- Source information

Smart English lookup

- Common English inflections can be routed to a base/lemma form.
- The learner grammar glossary helps interpret grammatical labels.
- Multi-word expressions are matched using the longest known expression when possible.

Learner expressions

Example	Type
under the weather	Idiom
piece of cake	Idiom
look after	Phrasal verb
give up	Phrasal verb
by the way	Conversational expression
figure out	Phrasal verb

8. Pronunciation Practice

- Use speech output as a pronunciation model for words and phrases.
- Repeat the same item as many times as needed.
- Lower the speech speed to focus on individual sounds and rhythm.
- Compare several voices if one speaker is difficult to understand.
- Combine pronunciation practice with dictionary definitions and saved vocabulary.

9. Vocabulary and Flashcards

Saved Vocabulary

- Save words or expressions from dictionary results.
- Store pronunciation, part of speech, definition, example, language, source, and save date.
- Use Speak to hear an item again.
- Mark an item Learning or Known.
- Remove items you no longer need.

Flashcard Study Mode

- Reveal - try to recall first, then show the answer.
- Speak - hear the current card.
- Previous / Next - move through the deck.
- Shuffle - randomize the study order.
- Filters: Due, All, Learning, Known.

Spaced review

Button	Meaning	Typical next review
Again · 10m	Not remembered	About 10 minutes
Good · 1d+	Remembered reasonably well	Starts around 1 day, then grows
Easy · 3d+	Very familiar	Starts around 3 days, then grows faster

Known status: Easy reviews can eventually promote an item to Known after longer review intervals.

10. Fast Lookup While Reading

Right-click selection

- Highlight a word or phrase in a note.
- Use the Logos context-menu action to look it up or speak it.
- This is useful when you want a quick answer without switching tabs.

Ctrl + hover dictionary

- Hold Ctrl (Control) and hover over a word or expression.
- A quick dictionary popup appears after a short delay.
- The popup can stay open after you release Ctrl.
- For known multi-word expressions, Logos attempts the longest matching expression instead of looking up only one word.

11. Privacy and Local Operation

- Speech synthesis runs using bundled local models.
- Dictionary resources are installed locally with Logos.
- A Logos account is not required.
- A paid cloud TTS API is not required for normal Logos speech.
- Obsidian and other plugins may have their own privacy/network behavior; review them separately.

12. Troubleshooting

Logos does not appear in Obsidian

Confirm it was installed into the correct vault, then open Settings → Community plugins and enable Logos.

Windows installer cannot find its data

Keep Install Logos.exe, Install Logos-1.bin, and Install Logos-2.bin together in the same folder.

macOS says “unknown developer”

Control-click Install Logos.command → Open → Open. Do not globally disable Gatekeeper.

A new version behaves strangely

Uninstall the previous Logos version in Obsidian, close Obsidian, then install the new release.

First speech is slow

The selected model may still be loading. Later requests with the same model are usually faster.

Chinese speech does not work

Make sure the complete installation, including multilingual models, was installed.

PDF text will not read

Confirm the PDF text can actually be selected. Image-only scans are not directly readable as text.

A phrase is not recognized

Not every possible phrase is in the learner-expression database. Try normal dictionary lookup or individual words.

13. Authors and Support

Logos v0.1.0

Created and developed by CourtneyJr (GitHub: @direwuff) and 珑珑王
